- » Financial Services
- » Manufacturing/Industrial
- » Public/Government
- » Research Boxes & Lab Space
- » Technology
 - Data Centers
- » Transportation

**Expanding Your Options
—Maximizing Your Performance**

EMCOR Services Northeast specializes in the design and installation of building automation systems, ranging from the latest Internet-based open-architecture technologies to complex process systems. In today's networked world, the ability to work together is a vital key to success. And in your facilities, whether it's air conditioning or lighting, heating or power generation, the more integrated your systems, the more likely you are to achieve high-performance operation, maximum cost savings and long-term value.

EMCOR Services Northeast's automation group can help.

We combine advanced systems expertise and a sound understanding of today's facilities' requirements with extensive experience in providing our clients with tightly integrated, centralized operational control. We can even subdivide your building into virtually any number of individual zones, each of which can be monitored to keep performance sequenced appropriately within the most exacting tolerances. The result is facilities that deliver consistently optimal operation, reduced energy consumption and lower overall costs.

Our technical staff is second to none.

From our LEED Accredited Professionals, Certified Energy Managers and Professional Engineers who can design your system requirements, to our factory-certified automation technicians — we provide the highest level of project delivery. We also provide on-going maintenance programs and technical support for all of your automation needs. Put it all together, and

you have a package of superior services that can make a significant difference in your facility's comfort, productivity and energy efficiency.

We keep your systems operating at peak efficiency.
